Pam:

Is there a way to put a authorization in the access agreement for EPA to be able to destroy and decommission/dispose/recycle/sale of storage containers (ie. above ground storage tanks, vacuum boxes, roll-off boxes, tanker trailers, drums, totes, etc) to the extent necessary to remove those items from the site so that they will not be used for illicit disposal of waste.

This would be nice to have authority to do this without being hit with a takings claim. Depending on how everything works out we may not be able to decontaminate the containers due to funding (not sure). Although, we may be able to do this by having a cleaning company decon for getting the metal value or item.

Basically, I would like to get the authority to do whatever is most cost effective to the project.

How would we handle this in a cosent for access?
